Vocal selection—Miss L. McNeely.

Vocal selection—Tulsa Apollo club.

5 p.m.—Theater party.

7 p.m.—Annual banquet—American Petroleum league.

The Selby people are drilling at 100 feet in their second test in 16-11, and the No. 1, located in the northeast of the northwest of the northeast of section 10, is still making 225 barrels. The sand was found at 2,555.

Messrs. Bond and others, an Oklahoma City bunch, have a 2,000,000 or 3,000,000 gas well in section 3-10, and thus the country south and west of Kellyville is showing up very nicely these days. The great trouble over there heretofore has been that wells have not been drilled deep enough and from now on it is likely that deeper tests will be made.

In the Headline Field.

The Rockland Oil & Gas company has a rig up for a test on the B. B. Brook farm, located in the northeast corner of the southwest quarter of 34-28-3w.

The Humble-Gypco Oil company has a rig up and is moving in standard tools for a test on the Williams farm, in the northeast corner of the northeast quarter of 34-28-3w.

Schoonmaker and others are drilling in the red beds at 2,125 feet, in the No. 1 Pierce, located in section 13-28-2w.

Roy Johnson is drilling at 450 feet in his Johnson farm test in 31-2s-3w.

The Sparks Development company are shut down at 1,600 feet to repair the boiler in their Sparks farm test in 30-2s-3w.

At Waiters.

There is a rumor in circulation to the effect that there are two wells adjoining the townsite of Waiters, neither of which have been reported in Tulsa. The chances are that before the paper goes to press that it will be possible to give the proper date.

Eldorado Kansas Field.

The production for the Ramsey Petroleum company's Berkman No. 1, for the week ending February 26, averaged 188 barrels daily. The same company's No. 1, Didsbury, averaged 210 barrels daily for the same period, while the Elbing Oil & Gas company's Lydig Farm No. 2 and 4 daily average for the week was 276 barrels.

The same people have a forty-barrel in their No. 1 Pruner farm in the southeast corner of the southwest of section 33-1-10 west at 2,100 feet.

The National on the Eyestone, in the same vicinity, is shut down at the top of the sand for tanking.

That Letter Was Written by John Sharp.

The letter from "one of our best fighters in France" in yesterday's oil column was written by John Sharp, and addressed to Jack Ryan and was read with more interest perhaps on account of the names having been left out by mistake.

Mr. Sharp is a forcible writer and has adopted the style of the doughboy made famous by the great writer, George Parry. When Mr. Sharp comes home he can have plenty of space in his column, and may well be welcome to his old seat.

Other oil reporters have made good, as for instance, Frank Billingslea, who held down the job on the World for a year or two, and therefore every one is predicting all kinds of luck for this new writer.

In the Osage.

Graham & Bird have completed two good wells on the east line of their lease in 6-24-10, No. 2 being good for 300 barrels, and No. 3 for 100. No. 3 is said to be still making 25 barrels daily.

The Carter Oil corporation & Graham & Bird No. 1, in the northeast corner of the southeast of 6-24-10 is still drilling.

The Atlantic Oil & Producing Co. is expecting a big meeting of oil men on March 25, when the National Petroleum congress will convene. The American Petroleum League is planning a strong program," said Mr. Colby.

New Scout Arrives Saturday.

C. E. Savage, scout for the Carter Oil company in the Sapulpa district announces the arrival of a second new member of the scouting force. The new boy is a member of the fraternity tips the scales at just eight pounds, and at present is attracting just about as much attention in scouting circles as a "mystery well" in a wildcat district. The child is Mr. and Mrs. Savage's second boy and his daddy is about right when he claims that it is hard to beat that pair of ace anywhere.

In Calahan County, Texas.

The Monitor and J. Parker Oil company are drilling on the Lee Maize farm at the center of the west end of the east half of section 6-2-10, Haysco 10,000,000 gas well at 2,100 feet. It might not gauge quite so much, but it is estimated as being about that capacity.

The same people have a forty-barrel in their No. 1 Pruner farm in the southeast corner of the southwest of section 33-1-10 west at 2,100 feet.

The National on the Eyestone, in the same vicinity, is shut down at the top of the sand for tanking.

han enough, have the control head raised up. There is reported to be evidence of oil over the derrick's roof and a little salt water in the mud pit.

Although a little salt water is said to be coming in alongside the 6% inch casing, with things at this stage, this test is being watched with interest by everyone interested.

North of Skiatook.

The Tulsa mineral company No. 2 well was drilled into the Burgess sand yesterday evening and is estimated at 100 barrels natural. The hole is standing with 1,400 feet of oil in the hole, and is at a total depth of 1,530 feet. It is located in the southwest quarter of 13-2s-1w.

Young County, Texas.

The Texas company is pulling the outside acreage on its test on the Graham acreage in K-5 Young county, and is still drilling.

The Prairie Oil & Gas Co. Keeler farm test in that vicinity is fighting a crooked hole at 3,200 feet. There is said to be increased gas at this depth but no increase in the oil.

Back in Tulsa to Stay.

H. P. Wilcox is drilling at 200 feet in the No. 2 Joe Lewis farm 31-3w-12. The wells are on the ground for No. 3 on the same farm.

Increase Interest in the Osage Sale.

The sale at Pawhuska tomorrow is attracting more interest every minute, and all records for attendance will be broken. There is no doubt but high prices will prevail, as usual and this in spite of the big royalties and the restrictions imposed upon the operator.

North of Beggs.

H. P. Wilcox is drilling at 200 feet in the No. 2 Joe Lewis farm 31-3w-12. The wells are on the ground for No. 3 on the same farm.
